for

GLOBE Program Europe and Eurasia Virtual Meeting

The **Europe and Eurasia GLOBE Meeting** will be held **online in the week of October 26**. As a part of the meeting broadcast, we would like to give voice to students.

We want to hear from all the GLOBE youtubers and Instagram freaks!

- Make a **max. 2 min long** video about how you observe trees, rivers, forests, clouds, lakes, soils or any other part of the environment around you
- Answer the following questions in the video:
 - **Why do you like to observe the place you selected?**
 - **Have you learned something new and inspiring during the observations?**
- Mention the **GLOBE Program**.

How to submit your video?

- You can record your video in **English or in your own language**. In both cases, **add English subtitles** to the video. If you do not know how to add subtitles, write down what you say on the video and submit the text together with the video.
- **Submit your video through an [online form](#) by **October 10****. If you are not able to share the video through online sharing point, you should still fill the online form and send the video to ee.region.globe@gmail.com .
- **Send us also a [media release form](#) signed by each adult and by a parent of each student in the video**

How to shoot a good video?

Photo by hannah grace on Unsplash

- **Plan your video** in advance: What you want to say? Who will talk about what? What is the best time of a day to record the shoot? What is the best composition for your shoot?
- Always **focus on your subject**. When someone talks, make sure you focus on their eyes.
- Make sure there is **enough light** in the scene. Avoid a window or light source behind your subject.
- Check that the **sound is clear and understandable**. Get your microphone close to subject. Talk louder and slower than in a regular conversation. Avoid recording near traffic and on windy days.
- When recording, hold your phone in **both hands or on a tripod** to avoid the shaky camera.
- It is always better to come closer than to zoom. Don't use digital zoom.
- **Clean your lens** before recording.
- Put your phone in an **airplane mode** to avoid unnecessary noise.
- **Practice** with your equipment in advance.
- Record the same video several times and then choose the best version. **Do not be afraid to repeat recording** if something went wrong.
